

PSS Can be downloaded here : [Windows](#) or [MAC](#)

Step 1: Launch the PSS software application. If you haven't changed it yet, use the user name "admin" and password as "admin".

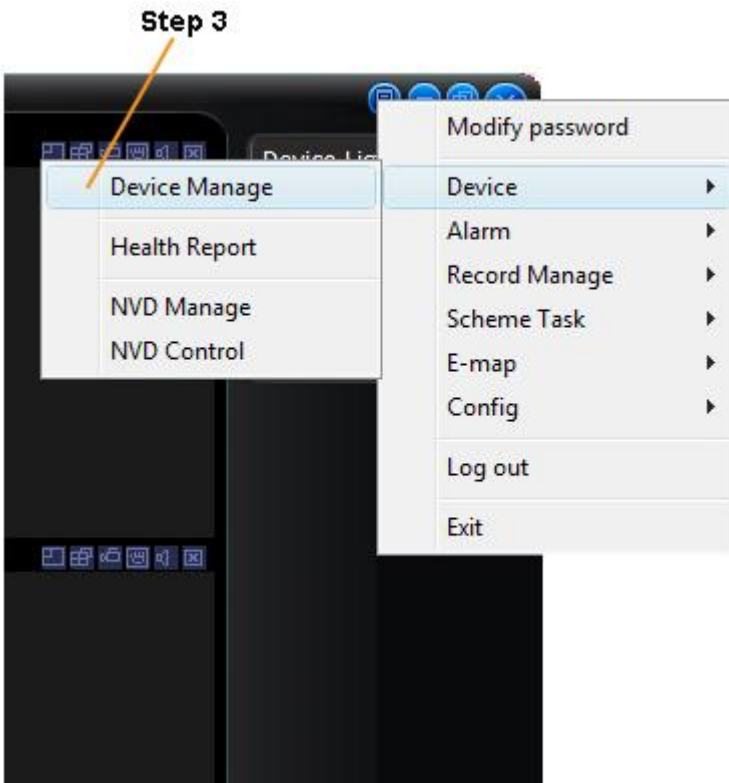

Step 2: Once logged in to the software, click on the "Full Menu" icon on the top right hand side of the software.

Step 2

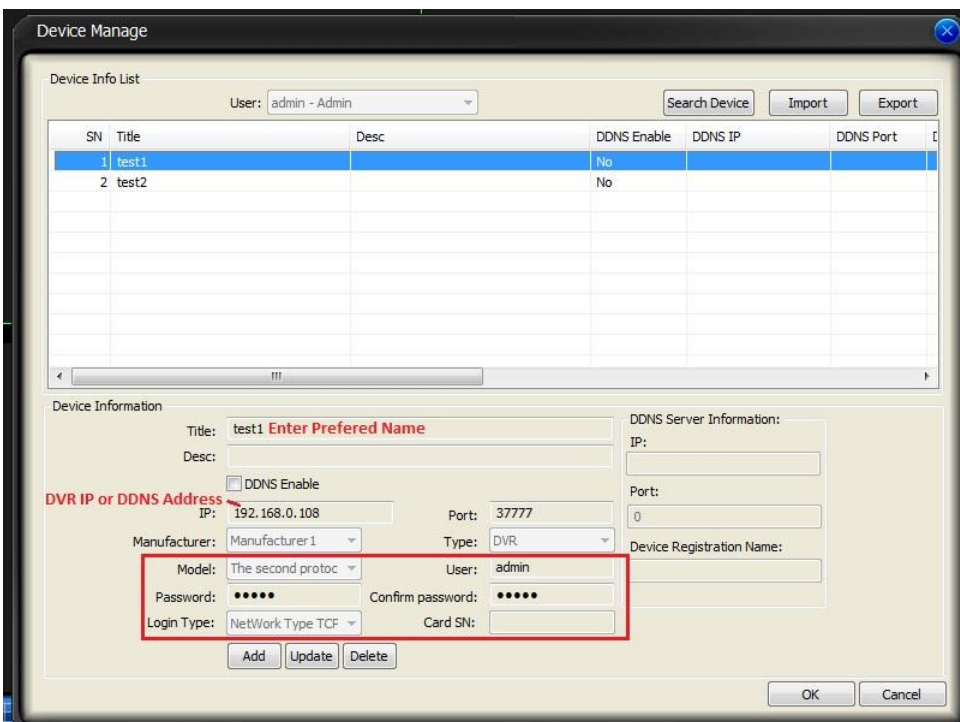

Step 3

When the drop down menu appears, click on “Device” then “Device Manage”

Step 4

You can add the Title Name or choice then in the “IP” section you can put your Static IP address or your DynDns host name. You will need to input your user name and password as well. Once complete hit save and click ok.

Step 5

On the top right hand corner you will see “**Device List**” this will allow you to view the added device, here you will need to right click the device and click login
